Package **CompSign**

Lena Morrill

October 2017

CompSign is a package for yadayada... overlooked that mutational signatures are compositional in nature yadayada. The reference manual can be found here.

5   Clustering of samples

5.1 Testing hypotheses about two populations

We might have our samples split into two categories; e.g. sex. As in Aithison 1986[], I follow a hierarchy of alternative hypotheses, from least to most complex.

Our first question is whether two populations have the same covariance and structure and center (i.e. if there is any distributional difference)

```
## This chunk was last ran in
timestamp()

## ##------ Tue Nov 20 14:37:35 2018 ------##

##TODO!!
```

The next is whether the populations have a different center:

```
## This chunk was last ran in
timestamp()

## ##------ Tue Nov 20 14:37:35 2018 ------##

## This dataset includes the two components above, as well as four others
## (a total of seven)
data("two_normal_pops_extended")

## Data from the Landscape... paper
data("Breast560")

wrapper_compare_populations <- function(predictors, response, ...){
  if(length(unique(response)) == 2){
    tmp <- compare_populations(predictors, response, ...)
    tmp <- tmp$info[1:2]
    tmp
  }
}

x <- do.call('rbind', lapply(1:ncol(metadata(Breast560)),
      function(k){
        wrapper_compare_populations(predictors = count_matrix(Breast560),
                                    response = metadata(Breast560)[,k])
        }
      ))
